# C**₩**VID-19

# Instructions for close contacts

### You have been identified as a close contact

You may have been exposed to COVID-19. You need to self-monitor and may also need to self-isolate and/or get tested.

### **Self-monitoring**

Monitor for symptoms of COVID-19 listed below for 10 days from the day you last had contact with the person who has COVID-19, even if you are fully vaccinated or had COVID-19 in the last 90 days.

If you develop symptoms of COVID-19 listed below, please use the Self-assessment Tool to see if you should get tested for COVID-19.

- Fever or chills
- Sore throat
- Cough
- Loss of sense of smell or taste
- Difficulty breathing

- Loss of appetite
- Extreme fatigue or tiredness
- Headache
- Body aches
- Nausea or vomiting
- Diarrhea

If you have no symptoms of COVID-19, you do not need to be tested for COVID-19.

### Testing and results

If you need to get tested, find the nearest testing location: healthlinkbc.ca/covid19test

#### Self-isolation

## Fully vaccinated or had COVID-19 in the last 90 days:

You are not required to self-isolate, and you can continue to participate in routine activities, such as work or school, as long as you do not have any symptoms. However, do not visit friends or relatives who are higher risk for severe COVID-19 (e.g. those currently in hospital, long term care, those with compromised immune systems, or over the age of 70 years) for 10 days after you were last exposed to COVID-19.

Fully vaccinated means you received both doses of a 2-dose series (e.g. AstraZeneca, Pfizer-BioNTech, or Moderna vaccine) or it has been more than 14 days since you received a single dose of a 1-dose series (e.g. Janssen).

## Not fully vaccinated and did not have COVID-19 in the last 90 days:

You need to self-isolate for 10 days from the day you last had contact with the person who has COVID-19, even if you do not have any symptoms. Self-isolation means keeping away from others to help stop the spread of COVID-19. Visit the BCCDC website to learn more about how to self-isolate. In addition to the 10 days of self-isolation, you should not visit friends or relatives who are higher risk for severe COVID-19 (e.g. those currently in hospital, long term care, those with compromised immune systems or over the age of 70 years) for 14 days after you were last exposed to COVID-19.

More details on risk factors for severe disease are available on the BCCDC website.

## CVID-19

# Instructions for close contacts

### Positive result

#### **Fully-vaccinated**

- Self isolate for at least 5 days
- Continue to isolate if you still have a fever or no improvement in symptoms
- Wear a mask for 5 more days even in settings where it is not required. Avoid higher risk settings like long term care facilities and gatherings.

#### Not fully-vaccinated

- Self isolate for at least 10 days
- Continue to isolate if you still have a fever or no improvement in symptoms

### Negative result

# Fully vaccinated or had COVID-19 in last 90 days

- No need to isolate
- Continue to stay home if you still have a fever or no improvement in symptoms

### Not fully-vaccinated

- Self isolate for at least 10 days
- Continue to isolate if you still have a fever or no improvement in symptoms
